I. INTRODUCTION

PURPOSE

The Planning and Systems Evaluation Division (NAFC-12) is responsible for development, evaluation and monitoring of policies, concepts, plans, and objectives for accounting and financial management systems improvement for the Department of the Navy (DON) and for developing DON policy for overall management and control of information requirements. Included in these responsibilities is the task of publishing and maintaining the DON Financial Management Improvement Plan (FMIP) in a current status and periodically issuing updated plans, as mandated by SECNAVINST 7000.18B, dated 12 April 1977. The goal is to publish an updated master plan annually. NAFC-12 has the lead role in this endeavor, but must rely heavily upon cooperation and input from the other NAVCOMPT directorates. This preliminary work program is provided to assist NAFC-12 in performing the annual update of the master plan.

PRELIMINARY WORK PROGRAM FOR UPDATING THE STRATEGIC MASTER PLAN

The preliminary work program shown on the attached exhibits is meant to serve as a tool to monitor and control the strategic planning process. should be used in conjunction with the methodology discussed in our technical report number TR-83W-035 entitled "Strategic Planning Methodology for Financial Management in the Department of the Navy." The latter report discusses the nature and purpose of the steps contained in the planning cycle. The preliminary work program serves as a tool to track the performance of planning cycle steps. The work program provides columns for indicating responsibility, planned dates for performance, and actual dates of performance. The exhibits attached indicate organizational responsibility, but NAVCOMPT planners can supplement the organizational unit with the actual name of the individual who has lead responsibility for task performance. Major steps described in the planning methodology are sometimes sub-divided into component sub-steps in order to assign specific accountability and ensure that supporting steps are performed timely, as well. Separate schedules are provided for tracking tasks that require input from several units. As an example, directorates and major claimants must submit completed survey questionnaires and quarterly status reports. A schedule is provided to track the receipt by directorate and claimant. A check or date can be noted in a cell to indicate milestone completion (column) by unit (row).

PLAN STRUCTURE

The planning unit has divided DON financial management into functional components or segments. These segments are: industrial fund, trust funds, stock fund, civilian pay, military pay, and general accounting/disbursing/

budgeting/finance. Within each functional segment, planners are attempting to identify and document goals, objectives, and strategies. In some instances, directorates with segment responsibility may not have explicit statements of goals, objectives or even strategies. In these instances, planners are working with the directorate prsonnel to analyze present actions, and current and proposed projects for the purpose of determining by inference what the implicit strategies are. Once these analyses have been completed, an explicit statement of strategy can be prepared.

In addition to analyzing the functional segments, planners are analyzing general strategy issues that impact multiple functional segments. Some general strategy issues are: telecommunications, management information requirements, ADP support, financial networks, internal controls, and cash management. Planning issues memoranda are being developed to point forcefully to the need to coordinate efforts on general support areas such as telecommunications among the several segments in order to avoid costly duplication and improve resource utilization.

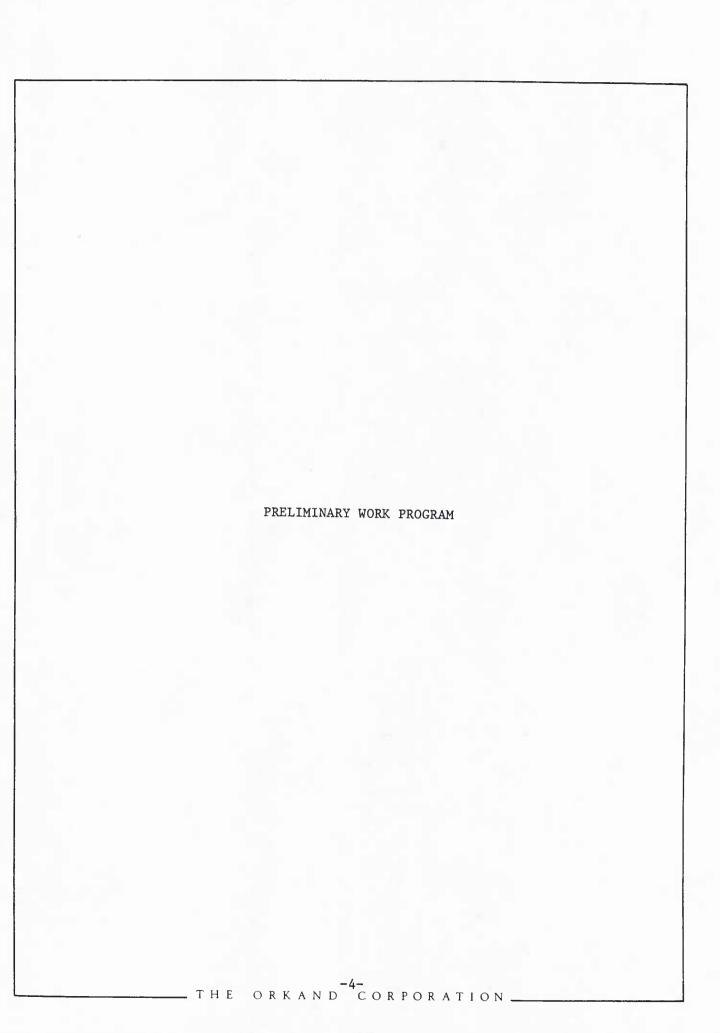

OFFICIAL DON SYSTEMS INVENTORY

Development and maintenance of the official DON systems inventory is the responsibility of the Systems Evaluation Branch. The primary purpose of the inventory is to facilitate coordination of GAO approval of accounting systems. Hence, procedures for performing this function are not discussed herein. However, the systems inventory process currently in progress is useful for analyzing segment strategies. For the first time, a complete, accurate, and DON-wide inventory of all accounting operational systems is being taken. This inventory of operational systems is being compared to the list of development projects for the purpose of portraying the nature of the DON financial environment in the out-years. This portrayal is vital for providing a baseline for effective DON-wide strategic planning for financial management.

THE PLANNING CYCLE

The preliminary work program main component discussed below consists of an annual planning cycle which starts with the Comptroller providing guidance directly to the planners and ends with his issuing the updated master plan. A highlight of the cycle is the Annual Planning Conference in which all NAVCOMPT components have the opportunity to provide input to the planning process. The recommended conference format consists of three days. The first day will focus primarily on global questions, such as what will be the future mission of NAFCOMPT, and within what type of DON environment must is operate. On day two, selected panels of experts will conduct concurrent work shops on general strategy issues. On day three, directorates will present the goals, objectives, and strategies of their respective functional segments. The methodology also provides for optional quarterly planning conferences that will likely be of a one-half to one-day duration and will focus on some new developments with strategic plan impact. Although most of the methodology's

steps are contain	ed in the annual cyc	ale there are		
plan monitoring a	nd keeping abreast o	of new development	some activities ents that are o	such as
